Cambio en el servidor Apache

Buscad el archivo en la carpeta xampp: **httpd.conf**

Editadlo con Visual Studio Code y en la línea que os indico añadid:
MultiViews

Reiniciad Apache y comprobad si podéis acceder desde la URL a un archivo php si usar la extensión **.php**
Por ejemplo:
http://localhost/ejercicio/usuarios.php
http://localhost/ejercicio/usuarios

```
 <Directory
"C:/xampp/htdocs">
                        #
        # Possible values for the Options directive are "None", "All",        # or
 any combination of:
                        #   Indexes Includes FollowSymLinks SymLinksifOwnerMatch
                ExecCGI MultiViews
                        #
                        # Note that "MultiViews" must be named *explicitly* ---
                "Options All"
                    # doesn't give it to you.
                        #
                        # The Options directive is both complicated and important.
                Please see
        # http://httpd.apache.org/docs/2.2/mod/core.html#options        # for
 more information.
                        #
                        Options Indexes FollowSymLinks Includes ExecCGI MultiViews

                        #
                        # AllowOverride controls what directives may be placed in
                .htaccess files.
                    # It can be "All", "None", or any combination of the keywords:
                    #   Options FileInfo AuthConfig Limit
                    #
                    AllowOverride All

                        #
                        # Controls who can get stuff from this server.
                        #
                        Order allow,deny
                        Allow from all

                        </Directory>
```
